

Checklist:

Is your company ready to migrate from VMware?

1. Costs and Licensing Model

- ☐ Has VMware's new licensing scheme significantly increased your company's operating costs?
- ☐ Did your company have to migrate to a subscription model without the option of perpetual licenses?
- ☐ Have VMware renewal or maintenance costs changed your budget planning?
- ☐ Have you compared VMware's total cost of ownership (TCO) with other alternatives like Red Hat?
- ☐ Is VMware's new pricing structure still aligned with your company's financial strategy?

2. Support and Operational Continuity

- ☐ Have you experienced changes in VMware support response times or availability?
- ☐ Has VMware's staff reduction impacted its ability to address and resolve critical issues?
- ☐ Has VMware removed key features that were essential to your operation?
- ☐ Does your company have a backup support and management plan in place for future changes to VMware?
- ☐ Have you explored options with certified partners that provide specialized post-migration support?

3. Strategic Planning and Operational Control

- Has your company defined an infrastructure strategy for the next 12-24 months?
- Do you have complete control over the costs and support of your virtualized environment, without depending on external changes?
- Have you evaluated virtualization solutions that allow for greater flexibility and cost predictability?
- Have you consulted with specialists about migration scenarios to Red Hat and other environments?

Evaluation of Results

- **7 or more affirmative answers:** Your infrastructure is at a critical point. It's time to evaluate an alternative that gives you greater control and predictability before VMware costs and support impact your operations.
- **4 to 6 affirmative answers:** There are areas for improvement. Although your infrastructure remains operational, there are risks in costs and support that could impact the medium term. A strategic assessment will allow you to anticipate changes and optimize your investment.
- **Fewer than 4 affirmative answers:** Your infrastructure remains stable, but preventive consulting will allow you to anticipate potential risks and make informed decisions for the future.

If you'd like to evaluate the available options for migrating your infrastructure with the lowest possible friction, let's talk. Schedule a conversation with our specialists, and together we'll define the best strategy for your company.
